DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 and 16-18, drawn to a method, classified in class 34, subclass 516.
 - II. Claims 5-10 and 19-29, drawn to an apparatus, classified in class 422, subclass 232.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process such as sterilizing or deodorizing objects or the apparatus as claimed can be used for heat-treating metals or materials.
3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

5. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. During a telephone conversation with Mr. Slobasky on December 18, 2006 a provisional election was made with traverse to prosecute the invention of Group II which was indicated as being allowable, claims 5-10 and 19-29. Claims 1 and 16-18 have been withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. Action on the merits of claims 5-10 and 19-29 follows:

9. On December 20, 2006, the examiner had indicated that the apparatus was allowable and requested approval for cancellation of non-elected claims drawn to the method with traverse. Applicant's attorney authorized cancellation of the non-elected claims reserving the right to file for a divisional application.

10. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided

by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Slobasky on December 20, 2006.

The application has been amended as follows:

In the Claims:

Cancel claims 1 and 16-18 in their entirety.

11. The following is an examiner's statement of reasons for allowance:

The prior art fails to teach and/or suggest a reactor for treating an object with a gas comprising a treatment section which includes at least a treatment injection section, an inlet for the object and an outlet for the treated object and a structure in which the object is automatically conveyed from the inlet to the outlet and is treated with the gas in a hermetically sealed space said treatment section further including a mechanism for holding the object in a gas atmosphere in the treatment section in a fixed place for a desired time and a mechanism for moving or swinging the object to prevent unevenness of the treatment; a conveying mechanism for conveying the treated object from the outlet of the treatment section to the outside of the apparatus wherein object to be treated is raised and lowered within the reaction system. The apparatus is specifically designed for the treatment of rubber windshield wipers wherein there is reaction-taking place within the reactor which chemically treats the rubber of the windshield wipers.
